**SUPPLEMENT TO PETITION TO MAKE SPECIAL
INVENTIONS FOR COUNTERING TERRORISM
(37 CFR 1.102 and MPEP § 708.02)**

The disclosed subject matter directly counters terrorism as it relates to remote surveillance and communications technology. By disclosing a console processing unit and method of transmitting to a console processor in a network, the invention enables the monitoring and analysis of a remote object. By determining an object's visual information through preferably fixed cameras or detectors and exact location through mobile target units utilizing Global Positioning Satellite system (GPS) receivers, the invention provides a more effective, corroborated surveillance of

suspected terrorist activity. In light of the foregoing arguments, Applicants respectfully requests reconsideration.

Respectfully Submitted,

Dennis Fernandez
